SUMMARY

Early-career backend engineer with an M.S. in Computer Science and experience designing APIs, cloud applications, database-backed services, and automated delivery workflows through internships, research, and projects. Published cybersecurity researcher with strong foundations in Java, Python, C++, SQL, software design, and technical troubleshooting. Comfortable translating requirements into clean, documented, and testable services while collaborating across technical teams. Excited to build reusable and scalable APIs that power IBM's cloud infrastructure and AI platforms. Based near San Jose, authorized to work full-time without sponsorship, and available immediately.

SKILLS

Programming & Fundamentals: Java, Python, C++, JavaScript, TypeScript, SQL, OOP, Data Structures, Algorithms
Backend & APIs: Spring Boot, Flask, FastAPI, REST APIs, Microservices, Serverless Applications, HTTP, JSON
Cloud & Infrastructure: AWS, GCP, Azure, Docker, Kubernetes, Terraform, Linux/Unix, IAM
DevOps & Delivery: Git, GitHub, Jenkins, GitHub Actions, GitLab CI, CI/CD, Deployment, Version Control
Databases & Modeling: PostgreSQL, MySQL, MongoDB, DynamoDB, SQL/NoSQL, Schema Design, Data Modeling
Testing & Quality: Debugging, Test Design, Automated Testing, Validation, Performance Analysis, Troubleshooting
Engineering Practices: Agile, Requirements Analysis, Technical Documentation, AI-Assisted Development

EDUCATION

University of Florida | Gainesville, FL
*Master of Science in Computer Science (GPA **3.73**)*
Relevant Coursework : Natural Language Processing, Advanced Data Structures, Analysis of Algorithms

Bennett University | Greater Noida, UP
*Bachelor of Technology in Computer Science Engineering (GPA **3.40**)*
Academic Distinction: Ranked in the Top 2% of the Class
Leadership: President, HackerEarth Chapter; Head of R&D, AI Society; Design Head, Robotics Club

EXPERIENCE

Lead Graduate Assistant - Dean of Students Office, University of Florida — August 2023 – June 2024
- Implemented PantrySOFT inventory software, reducing manual errors by 30% and improving efficiency.
- Collaborated with a cross-functional team of 45 to forecast supply needs, boosting inventory accuracy by 20%.

Research Intern - Georgia Institute of Technology — August 2022 – December 2022
- Researched and developed "CYBORG: End-to-End Semantic Correlation to Protect CPS from Compromised SCADA Hosts", an AI-driven cybersecurity solution, elevating threat detection by 30%.
- Engineered a machine learning-based anomaly detection pipeline in Python, reducing false positives by 25%, and co-authored a peer-reviewed paper accepted at the 44th IEEE Symposium on Security & Privacy.

Software Engineering Intern - Defense R&D Organization — June 2022 – August 2022
- Developed a "Radome Model Using MIMO Polynomial Regression Model for Passive Seeker Systems", improving radome design accuracy by 20%.
- Leveraged Python-based computational tools to analyze data, reducing manual processing time by 40%.

PROJECTS

Big Brain - MRI Classification | *Python* | *TensorFlow* | *PyTorch* | *OpenCV*
- Designed and trained an ensemble of CNNs (VGG16, AlexNet) to classify MRI brain scans for tumor detection using TensorFlow, PyTorch, and OpenCV; achieved 92.31% test accuracy.
- Optimized augmentation and model flow, reducing false positives by 15% and cutting inference time by 10%.

LaiD - Personalized Diet Planning Application | *React* | *Flask* | *AWS Lambda* | *DynamoDB*
- Built and deployed a personalized diet planning web app using React, Flask, and AWS; leveraged user BMI and dietary inputs to deliver tailored meal plans, increasing user engagement by 35%.
- Deployed on AWS Lambda and DynamoDB, scaling to support 40% more concurrent users without downtime.
